

Uplift

By Keya and Sharon from SynapTech

Not just an app, but a step towards making people with Parkinson's feel ***supported***, ***confident*** and ***empowered***

Problem

- Growing in prevalence
- Affects mental and physical health
- Communication problems
- Managing medication
- Finding relevant information

Anxiety
It's important to be able to recognise the symptoms of anxiety, so it can be treated as soon as possible. People with the condition may feel some of the following:
• a sense of dread
• constant worry
• difficulty concentrating
• feeling unable to relax
• difficulty sleeping
You may also experience physical symptoms if you're feeling anxious. These can include:
• sweating
• a pounding or racing heart (palpitations)
• tightness of the chest or feeling breathless
• dizziness
• trembling
• indigestion, nausea and stomach ache or cramps
• headaches

Our Learning Journey

Things we learnt

- New app development technologies
- Backend-Frontend communication
- Building machine learning models
- Collaboration using GitHub
- Time management skills
- Communication skills

Future vision

- Separate profiles for patients and carers
- In-app communication between users e.g. a forum
- Promoting app in hospitals & care homes
- Partnering with charities

Thank you for listening!
